RE: Application for Operations Position

Dear Hiring Team,

With over a decade of experience spanning logistics, supply chain management, and operational process verification, I am writing to express my strong interest in joining the operations team at Wing. The future of last-mile delivery is not built on hardware alone — it is built on the rigorous systems, safety protocols, and disciplined operational workflows that allow hardware to perform at scale. I bring a rare combination of large-team leadership and technical auditing depth that maps precisely to the demands of an advancing drone delivery network.

My operational foundation was shaped in high-volume, high-accountability environments. As an Assistant Operations Manager at Amazon, I led cross-functional teams of over 100 associates in a fast-cycle fulfillment setting, consistently meeting or exceeding regional KPI targets while driving continuous improvement through Lean Six Sigma methodologies. Systemic bottlenecks are not abstract problems to me — they are root causes to be isolated, documented, and closed. Subsequently, as Operations Manager at All Service Moving, I directed regional logistics and fleet deployment while conducting structured internal audits of operational workflows to strengthen both safety standards and financial accountability — disciplines that translate directly to the regulatory and safety requirements governing autonomous aviation.

What distinguishes my profile from that of a conventional logistics manager is forensic precision. In my current role as a Forensic Audit Consultant, I identify mission-critical liabilities within digital platforms, develop technical validation frameworks for evaluating system logic consistency and data integrity, and produce structured documentation of systemic vulnerabilities for risk mitigation. Operating a drone delivery network at scale demands exactly this discipline: the ability to read an operational or digital system not just for what it does, but for where it fails, and to build institutional knowledge around those failure modes before they compound.

Wing is redefining what logistics can mean at the infrastructure level, and I am genuinely motivated by the opportunity to contribute to that mission — not as a generalist, but as someone who brings operational rigor and forensic accountability to the same table. I would welcome the opportunity to discuss how my background in fleet management, data validation, and process verification aligns with where Wing is headed.

Thank you for your time and consideration. I look forward to the conversation.

Sincerely,

Albert Lane
