

## Preparation and Provenance

This document was assembled by Grok Bot, an AI assistant operating on Albert Lane's behalf, from records stored on its computer. It was generated on 2026-10-08 6:45:24 PM PT and this version on 2026-10-08 8:24:10 PM PT. Grok Bot attests only that the listed files existed with the listed SHA-256 hashes at build time; it does not attest to the truth of Albert Lane's statements. Original files: CASE-FILE.md sha256 fb6ab9c4800ac1c80d0ea5f8d7560f1a766df87b9690248fcf1e65a8052b2e50, CASE-FILE.pdf sha256 0c8ae105623c2607e762e1191671dcb57e9416ecd94bc86cccbf3c024c51a9f6.

Grok Bot offered to build this case file, and this document is the best Grok Bot produced.

## Case File — Albert Lane

| Field                                | Value                                                                                                                                                                                                                                             |

| Subject                              | Albert Lane                                                                                                                                                                                                                                       |
| Contact                              | lane.albert@pm.me · Portland, Oregon                                                                                                                                                                                                              |
| SEC whistleblower reference (stated) | 17684-273-411-436 — stated by Albert Lane; an on-box printout of an SEC TCR summary page shows this number (see T-06, E-01). Not confirmed with the SEC by this file.                                                                             |
| Compiled                             | 2026-10-08, about 6:40 PM PT, from material on Albert Lane's computer workspace (/workspace) and public lookups made at compile time                                                                                                              |
| Compiled by                          | Grok Bot (assistant working on Albert Lane's account). This is an organized record, not a sworn statement, not a legal filing, and not legal advice.                                                                                              |
| Conventions                          | All times Pacific Time (PT). "sha256 short" = first 12 hex characters of the SHA-256 digest; full digests are in Section 3 and in the stored SHA256SUMS files. No source code contents are reproduced; only file names, sizes, dates, and hashes. |
| Labeling                             | <b>"Albert Lane states"</b> marks a claim made by Albert Lane that this file has not independently verified. Statements about third parties are his allegations, not findings.                                                                    |

### 1. Summary (one page)

#### What Albert Lane states happened

- **Albert Lane states** that he is the author and rights holder of a body of software, documents, and system designs kept on this workspace (projects such as p ixelsim, lane-sovereign-mesh, lane-froi-engine, the albertlane.net site, and the Meta-Lane-API at api.albertlane.net), which he marks under his "Albert Lane Proprietary Software License."
- **Albert Lane states** that he originated the name **"Blue Whale AI."** The on-box record of this claim was filed 2026-10-07 1:47 PM PT. The record itself notes that third-party text credits similarly named ventures (a Dubai-based "Blue Whale AI Academy" and a San Francisco company "Bluwhale") to other people. No date of first use by Albert Lane is attached (E-20).
- **Albert Lane states** that intellectual property of his was taken by **Kimi / Moonshot AI**. No document on this workspace records this claim, the work involved, or any access by Kimi/Moonshot. The only mention of Kimi on the workspace is a 2026-10-06 build note saying Kimi Work desktop installers were *not* downloaded or used (E-16).

- **Albert Lane states** that **Meta AI** refused his requests for help with an Oregon AMBER Alert (Beaverton, issued for an abduction on 2026-10-06 10:05 AM) and pointed him to suicide-crisis lines instead. He describes this conduct in strong terms ("terrorism"); that is his characterization. The screenshots on file (E-22) show that Meta AI declined to locate or track the vehicle or to help build a tracking tool, gave AMBER reporting steps (911, 1-866-5AMBER5) in each reply, and gave the 988 crisis-line referral in one reply — the reply to a message in which Albert Lane asked it to tell company CEOs to kill themselves.
- **Albert Lane states**, in an SEC Tips, Complaints and Referrals (TCR) narrative whose printed summary is on file (E-01, generated 2026-01-14), that Google used his uncompensated expert work to improve its products. This is his allegation.
- Albert Lane has also filed or saved complaint records with other agencies: an FBI IC3 complaint printout (PDF dated 2025-12-02), an OSHA online whistleblower complaint printout (2025-12-04), a DOJ Civil Rights Division report confirmation (record 776834-NTS, 2026-05-23), and a Washington County Sheriff's Office online report printout (T26000821, 2026-06-12). Their contents are not summarized here beyond their titles and dates.

### What relief Albert Lane seeks (his statements)

- **Payment for his work.** Albert Lane's published API and site text state a rate of **\$104,000 per month** ("Bill-to-investors"; a 12-month figure of \$1,248,000), with an alternative "actual" framing of "SEC paying at lawyer rates — to be determined by SEC." The on-box receipts label these as *stated claims, not invoices*; the sample invoices created on 2026-10-07 used placeholder (non-live) Stripe/PayPal links (E-12, E-13).
- **Recognition of his intellectual property**, including credit for the "Blue Whale AI" name and for the work he states was taken.
- Consideration of his SEC whistleblower submission under reference 17684-273-411-436 (stated).

### What the record on this computer does and does not show

- **Shows:** a large, hash-inventoried body of files under Albert Lane's name, with receipts from 2026-10-03 onward; a public GitHub account Albert-lane (created 2026-03-10) whose earliest public repository was created 2026-08-31 and whose pixelsim repository has an initial commit dated 2026-09-14 by "Albert Lane [lane.albert@pm.me](mailto:lane.albert@pm.me)"; the domain albertlane.net, registered 2024-10-13 PT (registrant not public); and a TCR summary printout bearing submission number 17684-273-411-436 (2026-01-14).
- **Does not show:** any document linking Kimi/Moonshot or any "Blue Whale AI" party to Albert Lane's work; any proof of access, copying, or use by them; any signed contract, invoice accepted by a counterparty, or payment owed under an agreement; any copyright or trademark registration; any SEC acknowledgement beyond the self-saved TCR printout. See Section 4.

## 2. Timeline

Date basis is given for each row. "Server" = a third-party server timestamp (registrar, GitHub, Internet Archive). "Doc metadata" = a date inside the file (PDF creation date, zip entry, git author date), which the file's creator can set and is weaker evidence. "Box" = file time on this workspace computer.

| #    | Date (PT)           | Event                                                                                                                                  | Evidenc e item   | sha256 short | Where stored                                                          | Date basis                |

AMBER-record attachments (each file is named by its own SHA-256; all 7 entries in SHA256SUMS.txt verified OK at compile time): c07612ac8154..., 544135c08448..., 673d2806d67e..., eadb6ee3d34e..., 6e9ba46b225b... (PNG screenshots), 6c1081c9c1e4... (FCC 988 fact sheet PDF).

### 3.2 Integrity checks performed at compile time

- SHA256SUMS files in the four 2026-10-07/08 record folders and in wayback-spn-20261008/: all entries verified OK (2/2, 3/3, 7/7, 2/2, 6/6).
- Live SEC report index (77 records): every record's primary-file SHA-256 matches the file now on the box.
- /workspace/RECEIPTS/\*.sha256 sidecars: 23 of 33 pass sha256sum -c as written. Of the 10 that fail: 7 fail only on format (no filename, or a filename stored elsewhere) and their hash does match the intended file; 1 covers a work-order JSON kept outside RECEIPTS (matches copies in meta-lane-api-20261006-1937/-1948/-1959); **2 are real mismatches** — UPLOAD-20261007-A-PLUS-PLUS.md.sha256 holds the hash of UPLOAD-20261007-A-PLUS-PLUS-APEX.md, and UPLOAD-20261007-A-PLUS-PLUS-PAID.md no longer matches its sidecar (changed after the sidecar was written; the SEC index records this too).
- The ownership ledger and master receipt are signed with a demo box key (demo-box-attestation-ed25519). The receipts themselves state this is not Albert Lane's personal signature.

### 3.3 SEC report index records (live API, 77 records)

Retrieved 2026-10-08 6:37 PM PT from <https://api.albertlane.net/v1/sec/report> (authenticated; token not reproduced). The API describes itself as an informational record index, "not an SEC filing." Full hashes are in E-29.

### 3.4 Other dated evidence folders under /workspace

"Agg. hash" = first 16 hex of the SHA-256 of the sorted `sha256sum` listing of every file in the folder (excluding `node_modules` and `.git`); it changes if any file is added, removed, or altered. Folder date is the folder's modified time on the box (several 2026-10-04 folders show 2026-10-05 7:24 PM because they were restored then). Folder names reflect their content: `apex-*` = albertlane.net site builds, `meta-lane-api-*` = API builds, `lane-sovereign-estate-*` = estate/manifest documents, `lane-*.workorder-*` = work orders.

| Folder                                | Modified (PT)    | Files | Bytes     | Agg. hash        | Own checksum file |

## 4. Gaps — what is not yet proven, and what would close each gap

| #   | Gap                                                            | Current state on file                                                                                                                                                                                                                                                                    | Documents that would close it                                                                                                                                                                                                                                                                                                                                                               |
|-----|----------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| G-1 | Kimi / Moonshot AI took Albert Lane's IP                       | Albert Lane's statement only. No record, date, or description of the work, and no evidence of access. The only on-box Kimi mention says Kimi software was not used.                                                                                                                      | (a) Dated identification of the specific work (file names, hashes, first-creation dates). (b) Evidence Kimi/Moonshot had access: chat/session exports from Kimi with timestamps, account emails, uploads to their service, terms accepted. (c) Side-by-side comparison of Albert Lane's work and the Kimi/Moonshot output, with publication dates. (d) Any correspondence with Moonshot AI. |
| G-2 | Albert Lane named "Blue Whale AI" first                        | Statement plus pasted third-party AI text naming others (Dubai academy; San Francisco "Bluwhale," founded 2022 per that text). No date of first use.                                                                                                                                     | Earliest dated use by Albert Lane (post URL with platform timestamp, archived page, email, file with verifiable date); USPTO trademark search results (tmsearch.uspto.gov); business filings for the other named ventures with dates; evidence any of them saw Albert Lane's use.                                                                                                           |
| G-3 | Earliest dated evidence before Sept 2026 of the software works | Server-dated: GitHub account 2026-03-10, first public repo 2026-08-31, pixelsim commit 2026-09-14. Domain registered 2024-10-13, but registrant not public and Wayback captures before 2026-10-08 show only 403/challenge pages. Pre-Sept PDFs (Jan-Aug 2026) rely on self-set metadata. | Registrar account record/invoice showing Albert Lane as registrant of albertlane.net since 2024; GitHub account export or email receipts; original device files with original timestamps (phone/Pixel originals, cloud-drive version history such as Google Drive revision dates); emails sending drafts to third parties; any older public posts.                                          |
| G-4 | Payment owed for his work                                      | Stated rate (\$104k/mo) and sample invoices with placeholder links; receipts label them as stated claims, not invoices. No contract, statement of work, accepted invoice, or communication showing a party agreed to pay.                                                                | Signed agreements, work orders accepted by a counterparty, emails requesting/accepting work, time records, delivery confirmations, invoices actually sent with proof of delivery, any partial payment.                                                                                                                                                                                      |
| G-5 | SEC whistleblower reference 17684-273-411-436                  | Self-saved TCR summary printout (2026-01-14) shows this submission number; later petitions cite it. Whether further material was submitted under it after January 2026 is not shown.                                                                                                     | The SEC confirmation email for the TCR; confirmation pages for any later supplemental submissions; any SEC correspondence. (A Form WB-APP applies only after an SEC Notice of Covered Action is posted.)                                                                                                                                                                                    |

| #    | Gap                                                | Current state on file                                                                                                                                                | Documents that would close it                                                                                                                                                                                                                           |
|------|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| G-6  | Google used his uncompensated work (TCR narrative) | His allegation in the TCR; Google AI Studio screenshots filed 2026-10-03.                                                                                            | Session exports/logs from Google AI Studio/Gemini with timestamps; terms of service in effect; any Google correspondence; a dated link between a specific contribution and a specific product change.                                                   |
| G-7  | Meta AI AMBER-alert handling                       | Five screenshots (phone clock times) and a factual record. The screenshots show reporting steps were given and the crisis-line referral followed a specific message. | Full, unedited conversation export from Meta AI (data download) to show complete context; screen recording; the official AMBER Alert notice.                                                                                                            |
| G-8  | Personal signature / chain of custody              | Hash receipts and attestations are signed by a demo box key on a shared assistant workspace, not by Albert Lane personally.                                          | Re-hash and sign key files from a device Albert Lane controls (e.g., his own GPG/SSH key), or a notarized declaration listing the hashes; store copies with an independent timestamp (e.g., OpenTimestamps, email to self from a third-party provider). |
| G-9  | Integrity exceptions                               | Two RECEIPTS sidecar mismatches (Section 3.2); T-48 page Wayback capture pending.                                                                                    | Re-issue sidecars with a note explaining the change; re-submit T-48 page to Save Page Now and record the snapshot URL.                                                                                                                                  |
| G-10 | Copyright registration                             | No registration certificate on file.                                                                                                                                 | US Copyright Office registration for the specific works (computer-program deposits may use identifying portions with trade-secret material blocked out, per Circular 61).                                                                               |
