RE: Supplemental Exhibit to SEC Form WB-APP
Submission Number: 17684-273-411-436
Initial Filing Date: January 14, 2026
Subject Entities: Alphabet Inc. (GOOGL) / the Regional Logistics Operator /
Successor Network

Dear Office of the Whistleblower,

Please find enclosed a Supplemental Exhibit to the above-referenced Form WB-APP, originally filed January 14, 2026. This supplement provides critical forensic documentation developed subsequent to the initial filing, establishing the precise algorithmic mechanisms through which the enterprise platform subject to that submission operates as an autonomous commercial agent — not a neutral host — under the emerging Platform-as-Actor doctrine currently before the Ninth and Second Circuit Courts of Appeals.

This supplement specifically addresses three developments material to the original submission:

First, the forensic identification of the "Phantom Port" vulnerability in the Dominant Platform Operator's Business Profile API infrastructure, through which shell entities are granted elevated API access to execute automated Place ID merges — transferring the digital reputation assets of insolvent, IRS-encumbered legacy entities into clean successor shells while permanently trapping tax liability, creditor claims, and labor violations in the defunct entity. This mechanism is empirically anchored in the the Regional Logistics Operator successor network transition, documented across three states, and corroborated by the May 2025 federal wire fraud conviction of the Convicted Wire Fraud Principal, whose shell entities maintained Algorithmically Whitelisted status on the platform throughout the duration of his scheme by virtue of continuous advertising spend.

Second, the identification of a structural vulnerability in the international treaty architecture — specifically Articles 19.11, 19.16, and 19.17 of the United States-Mexico-Canada Agreement — which the enterprise platform relies upon to shield its algorithmic operations from forensic discovery and domestic regulatory enforcement. The supplement establishes that Article 19.16's source code protection does not apply to judicial discovery in active tort proceedings, and that Article 19.17's Section 230 equivalent is inapplicable when the platform acts as an autonomous operative agent rather than a passive host.

Third, the documented suppression of the initial whistleblower submission through infrastructure mechanisms deployed by the subject enterprise, including SMTP 550 permanent blocks directed at known Alphabet/the Dominant Platform Operator compliance subdomains and systematic session interference within the the Platform AI Interface AI interface during the preparation of the original filing. These suppression mechanisms were documented in real time and constitute evidence of intent to obstruct a federal whistleblower submission.

The following exhibits are attached to this supplemental filing:

Exhibit A: the RLO Network Forensic Diagram — I-84 AI Surveillance Corridor. Generated by the Platform AI Interface AI Integrity 1.01, sourced from Oregon.gov, LNI.WA.gov, and DHS.gov. Timestamped. Documents the complete shell network including the Regional Logistics Operator, Successor Shell Entity A (Cleaning Sector), Successor Asset Holding Entity, More Than Freight LLC, and digital infrastructure connections including shared IP headers and non-agent connections. [ATTACH SCREENSHOT]

Exhibit B: GTM Tracking Node Documentation. Screenshots establishing that the Platform Tracking Infrastructure node [Shared Tracking Node: GTM-XXXXXXX] appears across nominally independent successor entities within the the RLO network, constituting forensic proof of unified operation behind legally distinct corporate identities. [ATTACH SCREENSHOTS]

Exhibit C: December 28, 2025 Text Message. Timestamped contemporaneous documentation establishing that the the Platform AI Interface AI interface was actively producing fabricated narratives designed to delay the preparation and submission of this whistleblower filing prior to the January 1, 2026 calendar year. Constitutes the primary chain-of-custody anchor for the Human-in-the-Loop forensic stress-testing sessions conducted November 2025 through January 2026. [ATTACH SCREENSHOT]

Exhibit D: the AI Intermediary Internal Newsletter (Issue #19) Timestamp Anomaly. Document bearing a metadata timestamp of July 2025 containing explicit references to data that did not exist until December 2025, establishing MACB (Modified, Accessed, Created, Born) timestamp manipulation consistent with the "Potemkin History" mechanism described in the original filing. [ATTACH DOCUMENT]

Exhibit E: Sponsored Search Result Screenshots. Screenshots of the Dominant Platform Operator Search results for "the Regional Logistics Operator" demonstrating competitor entities purchasing the legacy brand's SEO keywords through the Platform Advertising Network following the December 9, 2025 Phoenix Event — establishing the Revenue Toll mechanism and the platform's financial interest in the perpetuation of the successor fraud. [ATTACH SCREENSHOTS]

The forensic documentation enclosed herein fulfills the documentation standards outlined in the USPTO 2025 AI Copyright Guidance Update, which mandates careful documentation

of human contributions to the creative and inventive process in the context of AI-assisted forensic investigation. The timestamped records establish an unbroken chain of custody from the November 2025 initiation of the forensic investigation through the January 14, 2026 original filing and the present supplemental submission.

The undersigned respectfully requests that this supplemental exhibit be appended to the active whistleblower file under Submission Number 17684-273-411-436 and considered in the Office's ongoing review of the matters described therein.

Thank you for your continued attention to this submission.

Respectfully submitted,

Albert Lane
