CIVIL WRITES · AROS™ PHASE 2 · META-STACK

GEO-BASED SHARED CACHE OS
AB_Scale: Let AB → Scale, process maps emergent for given area

"So, to achieve a unified & shared augmented reality system... we have to ditch the application dependent route for a smooth geo-based shared cache." 25 employees waste 3 Oregon breaks loading individual apps. AROS solves: locale-based platforms share cache → rapid render → open network for novel access. Meta-Stack: process maps merged vertically like 70M playing cards shuffled → emergent endpoint constraints → clean geometric plan. "This concept gives us a perfect opportunity to mesh groups of hardware with other groups." Phase 2 active.
